INTRODUCTION

There were 1.8 million tonnes of grapes crushed last year, an increase of 0.4 million tonnes (31.1%) on the previous year. This was achieved on an area of grape bearing vines that rose 1.4% to 166 thousand hectares this year from 164 thousand hectares last year. Yields rose 26.9% from 9.3 tonnes per hectare last year to 11.8 tonnes per hectare this year.

Beverage wine production also showed an increase, rising 28.5% to 1.3 billion litres. In contrast exports of Australian produced wine fell 9.2% to 715 million litres and domestic sales of Australian wine also dropped by 4.8% to 426 million litres. The result of these movements was an increase in inventory values of 5% from 1.8 billion litres last year to 1.9 billion litres this year. Imports of wine into Australia also rose this year by 55.6% to 53 million litres.

AREA OF VINES

The area of vines being cultivated this season was 173 thousand hectares which was 0.6% lower than last year. The total area of grape bearing vines was 166 thousand hectares compared to 164 thousand hectares last year. The area of vines not bearing grapes was reduced by 34.1% to 6.5 thousand hectares this season.

The net decrease in area planted under vines this year (derived from existing vines, vines planted, and vines lost during the year) was two thousand hectares, a significant change from the 500 hectares that were added last year.

AREA OF VINES continued

VINE PLANTING, Net change by state

VINEYARD IRRIGATION

There were seven thousand vineyards that irrigated this season, 88.3% of the eight thousand vineyards in Australia. The area of grapevines irrigated was 162 thousand hectares, with South Australia's seventy thousand hectares accounting for 43.2%. Along with New South Wales (41 thousand hectares) and Victoria (35 thousand hectares) the three main grape growing states have 90% of vineyards using irrigation. The average usage of water was 3.2 megalitres per hectare. South Australia's average was 2.7 megalitres per hectare, with New South Wales having an average of 3.8 megalitres per hectare and Victoria averaging the highest level at 4.1 megalitres per hectare.

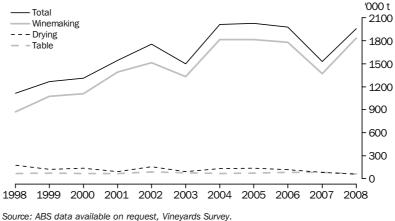

The most common watering method continues to be drip or micro spray with 131 thousand hectares, or 81.0% of the total irrigated area watered using this method. In all States the predominant watering method is drip or micro spray. However, the proportion of area irrigated by spray excluding micro spray methods in Victoria (25.4%) and the use of watering by furrow or flood in New South Wales (16.8%) are still significant.

Surface water from either state owned or private irrigation schemes was the most common source of water used by vineyards in Australia. There were 367 thousand megalitres drawn from this source. New South Wales (123 thousand megalitres), Victoria (118 thousand megalitres) and South Australia (111 thousand megalitres) collectively have 96.1% of the water sourced from state owned or private irrigation schemes. Nationally, the next most important water source for vineyards was underground water supply (75 thousand megalitres), followed by other surface water (46 thousand megalitres).

GRAPE PRODUCTION

The weight of grapes harvested this season was two million tonnes which was a 27.9% increase on last season. The production of white grapes was 933 thousand tonnes, a 14.3% increase on the tonnage harvested last year, representing 47.7% of the total grapes harvested. Red grape production had a significant increase, up 43.4% to one million tonnes, accounting for 72.6% of the increase in this years production.

There were 1.8 million tonnes of grapes harvested for winemaking, an increase of 34.0% on the 1.4 million tonnes harvested last season. The production of grapes for drying decreased further from last year by 30.7% to 56 thousand tonnes. Production of table and other grapes harvested decreased 19.2% to 64 thousand tonnes.

GRAPE PRODUCTION AND INTENDED USAGE

WINEMAKING LOCATIONS AND GRAPES CRUSHED

For the 2008 vintage there were 384 winery locations around Australia each crushing 50 tonnes or more of grapes, owned by 342 winemaking businesses. This compares with the previous years vintage where 385 locations crushing 50 tonnes or more were owned by 344 winemaking businesses. There were 1.8 million tonnes of grapes crushed, an increase of 434 thousand tonnes (31.1%) from last year.

A third of all winemaking locations were in South Australia, accounting for 45.3% of the national wine grape crush. This is a rise from last year where South Australia had 43.3% of the total. New South Wales/Australian Capital Territory had 22.9% of the total number of locations and 34.4% of the total wine crush, followed by Victoria (22.7% of all locations and 16.3% of all grapes crushed) and Western Australia (18.2% of locations and 3.4% of the grape crush).

When looking at crush capacity the 342 winemaking businesses were diverse in size. There were 174 businesses that each crushed from 50 to 400 tonnes of grapes, producing a combined crush of 33 thousand tonnes (1.8% of the total crush).

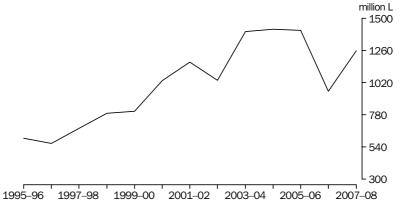

The 168 winemaking businesses that each crushed more than 400 tonnes of grapes crushed 98.2% of the national total. There were 14 winemakers that crushed more than twenty thousand tonnes each, accounting for a total of 1.3 million tonnes of grapes or 70.5% of the total crush. These 14 businesses averaged 92 thousand tonnes each.

BEVERAGE WINE PRODUCTION

There were 1.3 billion litres of beverage wine produced by winemakers that crushed more than 50 tonnes of grapes. This beverage wine production figure was 0.3 billion litres (28.5%) more than the total for last year.

Red/rosé wine made up 675 million litres (53.7%) and white wine 567 million litres (45.1%) of the beverage wine produced this season.

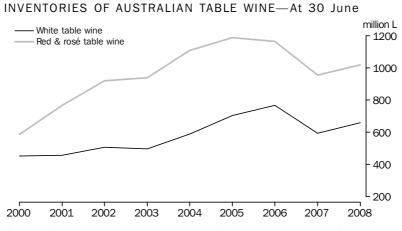

BEVERAGE WINE PRODUCTION

Source: ABS data available on request, Wine and Spirit Production Survey.

WINE INVENTORIESInventories of Australian beverage wine held by winemakers increased this year to 1.9billion litres at 30 June 2008. This was a 5.0% increase on last years end of financial yearfigure. Table wine inventories rose 8.4% to 1.7 billion litres as at 30 June 2008.

White table wine accounted for 661 million litres or 35.3% of the stock of total beverage wine stored by winemakers this year. Red/rosé table wine stocks of one billion litres still represented 54.4% of the beverage wine stock held by winemakers.

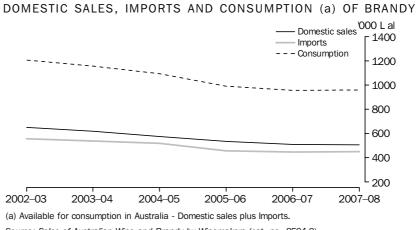

Source: ABS data available on request, Inventories of Australian Wine and Brandy Survey.

BRANDY

The domestic sales of Australian brandy of 508 thousand litres of alcohol were similar to last years sales. This follows the downward trend in domestic sales over the past six years, during which sales of Australian brandy have fallen 27.5% in total.

The volume of imported brandy cleared for home consumption steadied at 452 thousand litres of alcohol. Exports of Australian brandy fell to 4 thousand litres of alcohol.

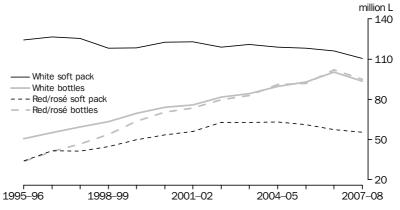

(a) Available for consumption in Australia - Domestic sales plus Imports. Source: Sales of Australian Wine and Brandy by Winemakers (cat. no. 8504.0).

DOMESTIC WINE SALES

Domestic sales of Australian wine last year were 426 million litres, a decrease of 4.8% on the previous year's total of 448 million litres. In terms of volume, red table wine decreased 4.6% to 155 million litres, white table wine fell 5.5% to 206 million litres and fortified wines fell 1.1% to 17 million litres.

The fall in domestic sales was most evident in sales of wine in glass bottles less than two litres followed by sales of wine in soft packs. Sales of wine in glass bottles fell 6.8% to 188 million litres, while sales of wine in soft packs fell 4.5% to 166 million litres. This was consistent across both red/rosé wine and white wine for both of these container types. In contrast sales of wine in other containers rose significantly, accounting for seven million litres of total sales, up 45% from 5 million litres last year. Three quarters of this was represented by red/rosé wine sales.

SUMMARY OF FINDINGS continued

WINE EXPORTS

Australian wine exports dropped last year with 715 million litres of wine exported to world markets, a fall of 9.2% on last year. The value of these exports fell by 198 million dollars or 6.9% to 2.7 billion dollars. However, the average price per litre rose 2.6% from \$3.66 last year to \$3.75 this year. For the 2007-08 period Australia imported 53 million litres of wine, significantly less than the volume exported.

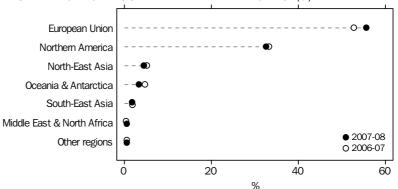

EXPORTS OF AUSTRALIAN WINE AND IMPORTS OF WINE

Source: ABS data available on request, International Trade database.

DESTINATION OF AUSTRALIAN WINE EXPORTS

The European Union continued to be the major destination region for Australian wine exports last year. It accounted for 398 million litres (55.6% of total wine exports by volume), valued at 1.3 billion dollars (47.2% of total wine exports by value). Exports to Northern America accounted for 233 million litres (32.6%) and were valued at 997 million dollars (37.2%).

The United Kingdom was the major destination country for Australian wine, importing more 268 million litres (37.5%) of all Australian wine exported last year. The volume of wine exported to the United Kingdom was valued at 895 million dollars. The United States of America imported 185 million litres or 733 million dollars worth of Australian wine last year.

SUMMARY OF FINDINGS continued

GRAPE AND WINE PRICES

The movement in price received for wine was 0.2%, rising into positive figures from last years value of minus 3.6%. The price of wine increased on average by 1.4% last year according to the consumer price index for wine, after decreasing by 0.6% last year. In comparison the annual All groups consumer price index was 3.4% this year, rising from 2.9% last year.

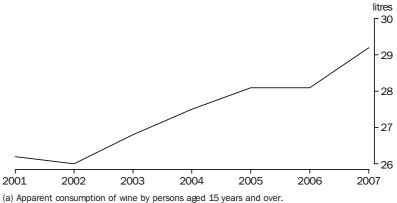

INDEX OF SALES PRICES RECEIVED BY WINE MANUFACTURERS, Change on previous vintage

Source: ABS data available on request, Price Indexes of Materials used in Manufacturing Industries.

WINE CONSUMPTIONThe apparent per capita consumption of wine by persons aged 15 years and over
increased by 3.9% in 2007 to 29 litres per person per year from 28 litres per person per
year in 2006. When converted to account for alcoholic content, the apparent per person
consumption of wine alcohol remained at 3.1 litres per person per year for 2007.

PER CAPITA CONSUMPTION OF WINE (a)

Source: Apparent Consumption of Alcohol, Australia (cat. no. 4307.0.55.001).

HOUSEHOLD EXPENDITURE

The most current details of household expenditure show that during 2003-04 Australian households spent an average of \$6.33 per week on wine. Households in the Australian Capital Territory spent the most with \$8.04 and those in Queensland the least with \$4.65. Australian Capital Territory households spent the highest proportion of their total weekly alcohol expenditure on wine (32.9%), while Northern Territory households spent the lowest (19.2%). Households in New South Wales (28.9%), Victoria (28.7%) and South Australia (27.8%) spent more than one quarter of their total weekly alcohol expenditure on wine.

WORLD COMPARISONS

HOUSEHOLD

EXPENDITURE continued

Of the countries for which 2005 data are available, Australia was the tenth largest producer of grapes. Australia produced 2.0 million tonnes compared to Italy (8.6 million tonnes), United States of America (7.1 million tonnes) and France (6.8 million tonnes). The area of vines planted in Australia (167 thousand hectares) was the thirteenth highest. Spain (1.2 million hectares), France (894 thousand hectares) and Italy (842 thousand hectares) had the greatest areas under vine. The Australian yield (12.1 tonnes per hectare) was higher than the world average yield of 8.5 tonnes per hectare.

PRODUCTION OF WINE, Principal countries

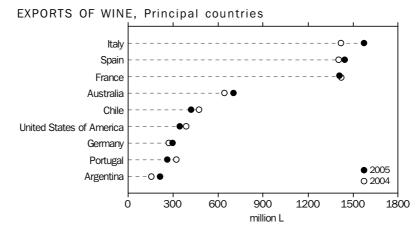

(a) Excludes SARs and Taiwan

Source: Office International de la Vigne et du Vin (0.I.V.) 2008.

Italy (5.4 billion litres), France (5.2 billion litres), and Spain (3.6 billion litres) were the largest producers of wine. In 2005 Australia produced 1.4 billion litres of wine and was ranked sixth in the world for wine production. This volume of wine meant that Australia was responsible for 5.1% of all the wine produced in the world. Italy (the world's largest wine producer) was responsible for 19.1% of the world's wine.

WORLD COMPARISONS

continued

Source: Office International de la Vigne et du Vin (O.I.V.) 2008.

Australia, with 702 million litres of wine exported, was ranked the fourth largest exporter of wine. The top three countries exporting the largest volumes of wine in 2005 were Italy (1.6 billion litres), Spain (1.4 billion litres) and France (1.4 billion litres). The top three countries accounted for 55.5% of total world wine exports. Australia exported 49.1% of its wine production, which was the highest proportion when compared to the other leading wine producing countries.

Australia's per capita consumption of wine was 22 litres in 2005, well below the leading countries of France (55 litres) and Italy (47 litres).

nil or rounded to zero (including null cells)

(a) Fresh weight.

.

Wine-grape production data are different than grape-crushings data in wine manufacturing and production (b) tables (see Explanatory Notes, paragraph 4).

(C) Yield represents the quantity of grapes produced per hectare of bearing vines.

(d) Includes Australian Capital Territory (ACT) and Northern Territory (NT).

EXPLANATORY NOTES

INTRODUCTION	1 This publication presents final estimates from the ABS collections: Inventories of Australian Wine and Brandy, 2007–08; Wine and Spirit Production, 2007–08; Wine Statistics, 2007–08 and Vineyards, 2008. Not all data from these collections are published here. Some further data are available for a charge, on application to the ABS.
	2 This publication is a summary of statistics on grape and wine production and related activities collected by the ABS and from other sources. Some of the data used in this publication were obtained from various ABS collections for which publications with appropriate Explanatory Notes are already available. The bibliography contains a list of these publications. However, much of the data are only available in this publication and the following notes are provided to assist users.
	3 The Viticulture tables replace the previous publication <i>Viticulture, Australia</i> (cat. no. 7310.0) and contain information on area of vines and production of red and white grapes for the 2008 season. The continuing collection of varietal data is supported by Australia's grape-growers and winemakers and the Australian government through the Grape and Wine Research and Development Corporation.
	4 Differences exist between the grape production intended for winemaking reported by grape growers in the viticulture collection and the quantity of fresh grapes crushed by winemakers reported in the Wine and Spirit Production Collection. Differences in the collection methodologies, as outlined below, mean some difference should always be apparent between the series.
SCOPE AND COVERAGE OF VITICULTURE SURVEY	5 Viticultural statistics relate to the year in which the harvest occurred and are derived from information obtained in a collection of all known growers.
	6 Prior to the 1999 collection, an exercise was undertaken to increase the number of known growers included in the collection. The improved coverage, of over 1,000 growers, means that the data presented for 1999 and later years are not directly comparable with data for previous years.
	7 The scope of the 2008 collection is based on establishments undertaking vineyards activity.
	8 Tasmanian data are collected in partnership with the <i>Department of Primary Industries and Water</i> . The scope of the collected data is the same as for other states.
	9 Viticultural statistics are presented on an Australian Geographical Indications basis in this issue. The Geographical Indications are official descriptions of Australian wine zones regions and sub-regions which are defined in the <i>Australian Wine and Brandy Corporation Act, 1980.</i> The zones and regions listed in the following table were provided to the ABS by the Australian Wine and Brandy Corporation. The list includes those regions which had been determined at the time of the Vineyards 2008 Survey.
	10 For more detail on Australian Geographical Indications including maps of the zones and regions contact the Australian Wine and Brandy Corporation web site

SCOPE AND COVERAGE OF WINE SURVEYS

11 Winemakers who crush more than 400 tonnes of grapes are included in the Wine and Spirit Production Survey. Wine production data are collected from these winemakers on a winery (location) basis to allow for state and regional data output. The grapes crushed by these wineries includes grapes owned by others and crushed on a commission or contract basis, often for wine producers who do not have their own crushing facilities. These wineries account for approximately 98% of total crushings by all winemakers crushing 50 or more tonnes of fresh grapes. Limited information on the quantity of grapes crushed and domestic wine sales are also obtained from wineries crushing between 50 and 400 tonnes. These data are collected on a winery (location) basis in the Wine Statistics Survey. The main purpose for this supplementary collection is to establish the scope and coverage of both the main production collection and the monthly wine sales collection.

12 Winemakers who crush more than 400 tonnes of grapes and have domestic wine sales of 250,000 litres or more in either of the two previous years are included in the Inventories of Australian Wine and Brandy Survey. These details on inventories of Australian beverage wine by wine type are collected at 30 June. For those winemakers that have sales less than 250,000 litres and have a grape crush of 400 tonnes or more, a freestanding set of inventory questions have been included in the Wine and Spirit Production Survey.

13 All inventories data are collected on an Australia-wide basis only and state figures are therefore not available. Inventories data collected from 1996 include all Australian-produced wines owned by these winemakers and held anywhere in Australia. In years previous to 1996, inventories included only those Australian-produced wines held by winemakers on any of their own premises, regardless of ownership. This change in the measurement of inventories means that data for 1996 and later are not directly comparable with earlier years.

14 The number of winemakers who fall within the scope of the wine inventories collection may vary from year to year as sales vary and individual wineries are included in, or excluded from, the wine sales collection. It is possible that inventories data may vary slightly each year as new wineries, with either large or small inventories, come into the scope of the collection. In particular, the published (i.e. closing) inventories figures for any one year may not equate with the opening inventories for the following year.

15 The wine content of products consisting of a mixture of wine and fruit juice, commonly known as 'coolers', is included in the appropriate wine category of the wine from which it is made, which is generally table wine.

PRICE INDEXES**16** The Sales by manufacturers index consists of three components: 'Domestic'
represents the price manufacturers receive for wines manufactured for domestic
consumption; 'Export' represents the price manufacturers receive for wines that are
exported and are priced on a 'free on board' (f.o.b.) basis at the main Australian ports of
export; and, 'Total wine' which represents the combined index of Domestic and Export.
The valuation basis for these indexes is basic prices, defined as the amount received by
the producer exclusive of any taxes on products and transport and trade margins. Refer
Producer Price Indexes, Australia (cat. no. 6427.0), unpublished data and *International
Trade Price Indexes, Australia* (cat. no. 6457.0), unpublished data.

17 The Consumer index for 'Wine' is the Consumer Price Index (CPI) for wine, while the 'All groups' index is the All groups CPI. Refer *Consumer Price Index, Australia* (cat. no. 6401.0).

ACKNOWLEDGMENT**18** ABS publications draw extensively on information provided freely by individuals,
businesses, governments and other organisations. Their continued cooperation is very
much appreciated: without it, the wide range of statistics published by the ABS would

EXPLANATORY NOTES continued

not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

ABS PUBLICATIONS

19 Current publications and other products released by the ABS are available from the ABS web site <http://www.abs.gov.au>. The ABS also issues a daily Release Advice on the web site which details products to be released in the week ahead. The ABS may have other relevant data available on request. Inquiries should be made to the National Information and Referral Service on 1300 135 070.

GLOSSARY

D. I	
Beverage wine	Table, sparkling and fortified wine produced for direct consumption and not for distillation.
Brandy	The spirit obtained by the distillation of wine in such a manner as to ensure that the spirit possesses the taste, aroma and other characteristics generally attributed to brandy, in acordance with the requirements set out in the Schedule to this Standard.
De-alcoholised wine	Normally fermented wine in which the alcohol has been removed and which retains all other components.
Distillation wine	Wine used for the purpose of distillation into grape spirit.
Domestic sales	All sales of Australian produced wine by winemakers within the scope of the <i>Sales of Australian Wine by Winemakers</i> survey, whether they be wholesale or retail sales, or bulk sales to other wineries outside of the scope of the survey. Excluded are inter-winery sales, sales where the wine will be exported, sales to other winemakers with on-site crushing facilities, sales for ship and aircraft stores, sales of imported wine and the volume of imported wine blended with Australian wine sold domestically.
Exports	Exports of wine to overseas ports including sales made by exporters and wine producers.
Feints and low wine	Parts of the distillate which are not useable.
Fortified wine	Wine to which grape spirit has been added, thereby adding alcoholic strength and precluding further fermentation. Fortified wine must contain at least 150 millilitres/litre and not more than 200 millilitres/litre of ethanol at 20° Centigrade.
Grafted/grafting	The connection of two pieces of living plant tissue, so that they unite and grow as one plant.
Grape spirit	Alcohol spirit of vinous origin used in fortification or as a base for grape flavoured spirits. The spirit is obtained from the distillation of wine, by-products of winemaking or the fermented liquor of a mash of dried grapes and contains methanol in a proportion not exceeding 3 grams per litre at 20° Centigrade of the ethanol content.
Imports cleared for home consumption	Imported goods brought into the country for consumption or further processing, but excluding goods imported with the reasonable expectation of re-export within a limited time.
Intended planting	The area of vines, reported on the ABS Vineyards collection form, grape growers intend to plant or graft after the current harvest, but before the next harvest.
Low alcohol wine	Wine in which the alcohol content has been deliberately reduced or wine which has been produced with a lower alcohol level using either dilution or partial fermentation.
Marc	The residue of grape skins and seeds after the juice has been extracted.
Table and other grapes	This category refers to grape production that is not used for either winemaking or drying.
Table wine	A product of the complete or partial fermentation of fresh grapes or products derived solely from grapes.
Sparkling wine	The product of complete or partial fermentation of wine with contained sugars that has become surcharged with carbon dioxide.
Unfermented grape juice	A sweet, clear, non-alcoholic liquid. Winemakers use the term to refer to must which has undergone clarification and stabilisation.
Unfortified wine	Table or sparkling wine which must contain at least 80 millilitres/litre of ethanol at 20° Centigrade. Unfortified wines rely solely on fermentation for their alcoholic strength.
