## IN THIS ISSUE

Where available, the statistics in this issue are presented as time series for the last three years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.

Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the Australian Bureau of Statistics for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to the National Information Service on 1300 135 070 or <client.services@abs.gov.au>.

## EXTENDED TIME SERIES

Long time series datacubes for this publication are now provided on the ABS website.

## SYMBOLS AND OTHER USAGES

See the Abbreviations section following the Explanatory Notes.

Brian Pink  
Australian Statistician

INTRODUCTION

The construction industry plays an important role in the Australian economy and has shown strong growth over recent years. In 2006–07 the construction industry contributed 6.7% to Gross Domestic Product (GDP) and as at May quarter 2007 employed 9.0% of the Australian workforce.

The demand for and supply of construction is driven by a variety of factors including economic growth, changes in interest rates, immigration policies, labour availability and changes experienced within other industries (e.g. agriculture, mining and manufacturing). There is a current media focus on the residential building component of construction lately due to the low level of housing availability and housing affordability in all major cities.

This article demonstrates the range and usability of data available on the construction sector. It presents what the construction industry is, the significance of the construction industry to the Australian economy and how it has changed over time, the contribution made to the labour force and how average weekly earnings have moved over time, and how the price indexes of materials used in buildings and output from the construction industry have changed over the last four financial years.

CONSTRUCTION INDUSTRY  
DEFINITION

The construction industry consists of those businesses mainly engaged in the construction of residential and non-residential buildings (including alterations and additions), engineering structures and related trade services classified under the Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006.

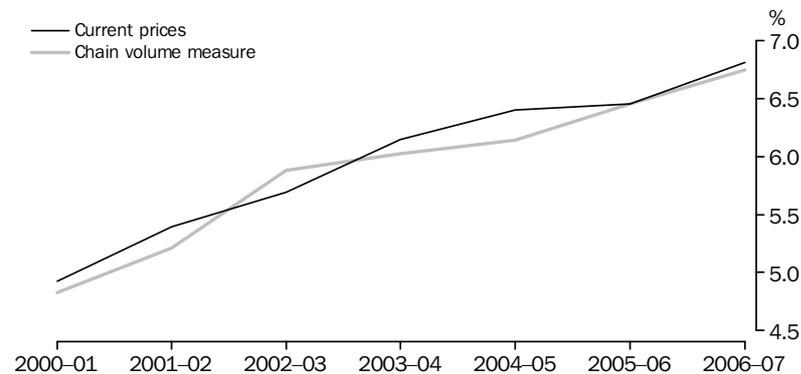

CONTRIBUTION TO GROSS  
DOMESTIC PRODUCT

GDP is the total market value of goods and services produced in Australia within a given period after deducting the cost of goods and services used up in the process of production, but before deducting allowances for the consumption of fixed capital. The construction industry has gradually increased as a share of GDP from 5.4% in 2001–02 to 6.8% in 2006–07.

CONTRIBUTION TO GROSS DOMESTIC PRODUCT

continued

INDUSTRY GROSS VALUE ADDED, Construction Industry as percentage of total GDP

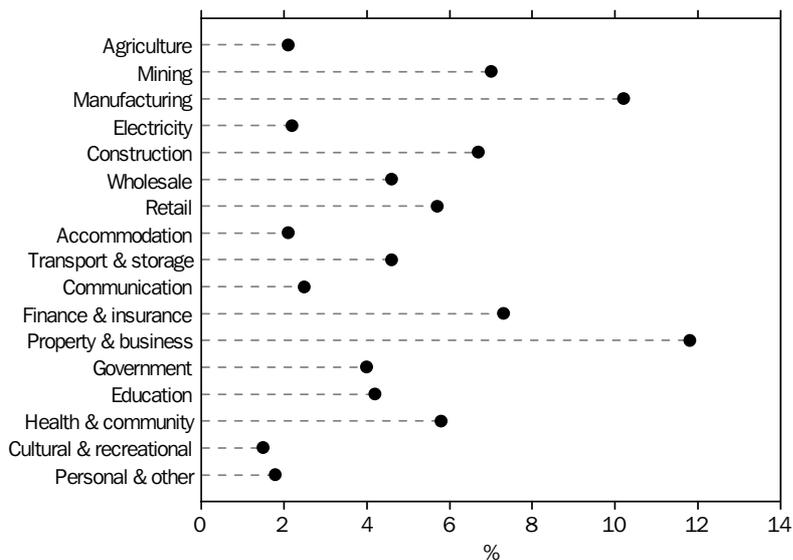

Chain volume measures, reference year is 2005-06

Source: Australian System of National Accounts, 2006-07, cat. no. 5204.0

In 2006-07 construction was the fifth largest industry in current price terms. It ranked behind Property and business services (12.2%), Manufacturing (10.3%), Finance and insurance (7.2%) and Mining (7.1%).

INDUSTRY GROSS VALUE ADDED, Percentage of GDP by Industry—2006-07

CONSTRUCTION WORK DONE

In chain volume terms, the value of construction work done during 2006-07 was \$112,817.1 million, a 5.7% increase from the previous financial year.

In 2006-07, the largest component of the construction industry was Engineering construction at \$47,538.5 million, representing 42.1% of total construction.

INDUSTRY PERFORMANCE

In 2005-06 (the most recent data available), operating profit before tax for the construction industry rose by 15.1% to \$19,485 million from the previous financial year.

Total income rose from \$174,162 million in 2004-05 to \$198,802 million in 2005-06, an increase of 14.1%. Total expenses rose from \$157,655 million in 2004-05 to \$179,329 million in 2005-06, an increase of 13.7%.

**BUSINESS INVESTMENT**

During the three years from 2003–04 to 2006–07, private new capital expenditure in the construction industry increased by 52.2% from \$1,725 million to \$2,626 million. This increase was largely due to the increased expenditure on General Construction which increased by 63.3% during this period. Over the three year period, expenditure on Construction Trade Services increased 46.1% from \$1,109 million to \$1,620 million.

**LABOUR**

The construction industry is one of the largest employing industries in Australia. As at the May quarter 2007, there were 937,300 people employed in the construction industry representing 9.0% of the total workforce. It was the fifth largest employing industry behind Retail (14.2%), Property and business services (12.0%), Health and community services (10.5%) and Manufacturing (10.4%).

**EMPLOYMENT BY INDUSTRY, as percentage of total employment, May 2007**

Source: *Labour Force, Australia, Detailed, Quarterly, May 2007*, cat. no. 6291.0.55.003

Over the three years from May 2004 to May 2007, the number of persons employed in the construction industry increased from 801,700 persons to 937,300 persons, an increase of 16.9%. This was higher than the increase in the number of people employed in all industries over the same period, which was 8.4%. Of the 937,300 persons employed in the construction industry, 30.7% were employed in General Construction and 66.7% were employed in Construction Trade Services.

Hours Worked

Over the period from May 2004 to May 2007, the average hours worked per week by employees in the construction industry was higher than the average for employees in all industries. In May 2007, workers in the construction industry worked an average of 39.0 hours per week compared to an average of 34.7 hours per week in all industry groups.

AVERAGE HOURS WORKED PER WEEK(a), Construction Industry

	2004	2005	2006	2007

Average Weekly Earnings

The average weekly earnings (AWE) for employees engaged in the construction industry is higher than the average for all industries. This applies to both full-time adult employees and the AWE for all employees. In May 2007, the AWE for all employees in the construction industry were 23.3% higher than the AWE for all industries. In May 2004, AWE for all employees in the construction industry were 13.7% higher than those for all employees in all industries. For all employees in the construction industry, AWE have increased 25.5% between 2004 and 2007 while AWE for all employees for all industries have increased by 15.7% over this three year period.

*Status of Employment*

Of persons employed in the construction industry in May 2007, 72.1% (676,000) were employees, compared to 88.3% for all industries. The second highest percentage of workers were engaged on an 'Own account' basis and constituted 22.5% (210,600) of persons employed in construction in May 2007 compared with 8.8% for all industries.

PERSONS EMPLOYED, By status of employment—May 2007

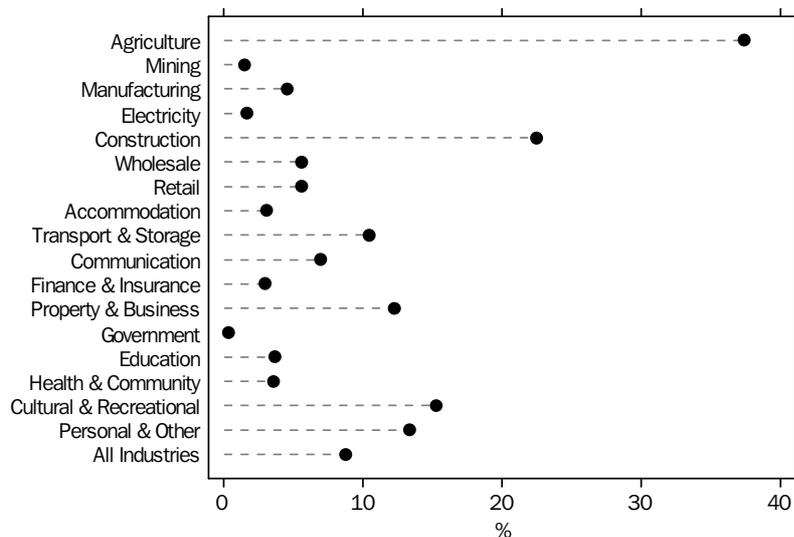

Type of Employment	Employee	Employer	Own account worker	Contributing family worker	All employees

Industrial Disputes

In the construction industry, there has been a 91.9% fall in the number of industrial disputes from 371 in 2003–04 to 30 in 2006–07. This is greater than the drop in the number of industrial disputes for all industries for the same period (–79.9%).

In the construction industry there were 8,100 employees involved in industrial disputes in 2006–07, falling from 105,800 in 2003–04 (–92.3%). There was a similar fall in the number of working days lost for the same period (–92.2%) from 119,500 days in 2003–04 to 9,300 days in 2006–07. The 92.2% fall in the number of working days lost in the construction industry was larger than for all industry (–84.0%) which fell from 552,400 days lost in 2003–04 to 88,400 days lost in 2006–07.

INDUSTRIAL DISPUTES

	2002–03	2003–04	2004–05	2005–06	2006–07

Source: ABS data available on request, Industrial Disputes, Australia, cat. no. 6321.0.55.001

In 2006–07, the ratio of working days lost per employee involved in industrial disputes is lower in the construction industry than for all industries. The average number of working days lost per construction industry employee involved in industrial disputes was 1.15 days, while for all industries, the average number of days lost for employees involved in industrial disputes was 1.2 days.

PRODUCER PRICES

The producer price indexes for the materials used in building showed increases over the period observed in the table below with the index of materials used in house building increasing 8.8% from 2002-03 to 2005-06 and materials used in other than house building increasing 3.3% from 2002-03 until 2003-04 when the series was discontinued.

PRODUCER PRICE INDEXES, Materials used in a building(a)

	2003-04	2004-05	2005-06	2006-07
Materials used in House Building	134.3	138.8	142.0	147.0

(a) Reference base 1989-90 = 100.0

Source: *Producer Price Indexes, Australia, March 2008*, cat. no. 6427.0

Similarly, the producer price index for output from the construction industry has also shown increases over the observation period (2003-04 to 2006-07). House construction increased 12.9%, Residential building construction nec 19.7%, Non-residential building construction 22.3%, Road and bridge construction 15.8% and General construction 17.6%.

PRODUCER PRICE INDEXES, Output from Construction Industry(a)

	2003-04	2004-05	2005-06	2006-07
House construction	123.7	130.6	136.1	139.7
Residential building construction n.e.c.	121.0	132.1	138.7	144.8

Road and bridge construction	120.8	125.8	133.2	139.9

(a) Reference base of each index: 1998-99 = 100.0

Source: *Producer Price Indexes, Australia, March 2008*, cat. no. 6427.0

**CONCLUSION**

Construction is an important industry in the economy, contributing 6.7% to GDP in 2006–2007, ranked just behind the mining industry. Engineering construction has been the fastest growing sector over the last five years. This sector overtook the residential building sector in value of projects in 2005–06, and increased this lead in 2006–07. Growth in average weekly earnings for employees in the construction industry has also shown rapid growth. More people are employed in the sector than ever before, although it appears more people are still required by the industry.

These and other construction industry indicators affirm the importance of construction in the economy.

March	78.0	0.679	0.5	27.1	53.3	14.4	102.0	103.6	104.1

(a) Sales is defined as gross non-farm product plus imports of goods and services less changes in private non–farm inventories.

(b) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge. TFI = Total factor income.

(c) Interest paid component contains original data.

(d) By convention, zero productivity growth is assumed for industries in the non–market sector, mainly government and some service industries. Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

March	<b>-19 492</b>	-8 019	-8 258	44 655	-52 912	239	-11 400	-73

(a) The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in tables 2.4 to 2.7 obtained from *International Trade in Good and Services, Australia*, (cat. no. 5368.0) issued monthly, due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia*, (cat. no. 5302.0).

(b) In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with corresponding monthly seasonally adjusted estimates, shown in table 2.4 due to the independent seasonal adjustment of the Quarterly and Monthly data.

na not available

(a) For all time periods, estimates for sugar, sugar preparations and honey are included in Other non-rural.

(b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in tables 2.1 obtained from *Balance of Payments and International Investment Position, Australia*, (cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia*, (cat. no. 5302.0).

(c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in table 2.1 obtained from *Balance of Payments and International Investment Position, Australia*, (cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.

(a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and Gross Domestic Product for the year ended with that period. Other ratios use only data for the year ended with the period shown.

(b) For the latest reference period, GDP for the year ended with the previous quarter is used.

- (a) The exports data presented in this table differ from those in Tables 2.1 to 2.5 because they are recorded on an international trade basis rather than a balance of payments basis and are compiled from a different edition of the data.
- (b) The ten member nations of ASEAN are Brunei, Cambodia, Indonesia, Laos, Malaysia, Myanmar, Philippines, Singapore, Thailand and Viet Nam.
- (c) The twenty seven member states of the EU are Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Republic of Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Slovak Republic, Slovenia, Spain, Sweden, and the United Kingdom. Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovak Republic and Slovenia are included from July 2004. Bulgaria and Romania are included from August 2007.

(a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.

(b) Base for index: 2005–06 = 100.0.

(c) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.

(d) Deflated by the Gross National Expenditure deflator.

(e) Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.

(f) Nominal unit labour costs (see footnote (g) deflated by the derived implicit price deflator for gross non-farm product.

(g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

na not available

(a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank.

(b) Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector.

(c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations.

(d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.

(e) Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private non-bank sector.

(f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.

(g) Bills outstanding under acceptance and endorsement commitments by banks.

(h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are period average exchange rates.

(b) On January 1, 1999 eleven European Union nations launched the Euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The Euro was immediately available for electronic financial and business transactions, but Euro coins and notes were not issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the Euro.

SELECTED INDICATORS PER HEAD OF POPULATION (a)									
<b>Final demand (\$'000) (Chain volume measures) (seasonally adjusted)</b>									
March Quarter 2008 (Q)	12.0	12.3	12.9	11.3	14.7	11.1	17.5	24.8	<b>12.7</b>
<b>Retail turnover (\$) (Chain volume measures) (seasonally adjusted)</b>									
March Quarter 2008 (Q)	2 705	2 638	2 790	2 541	2 847	2 455	2 746	3 222	<b>2 710</b>
<b>Retail turnover (\$) (trend)</b>									
May 2008 (M)	942	918	990	911	1 012	877	992	1 138	<b>952</b>
<b>Private new capital expenditure (\$) (seasonally adjusted) (b)</b>									
June Quarter 2008 (Q)	758	855	1 154	776	3 210	2 743	1 439	643	<b>1 162</b>
<b>Registration of new motor vehicles (no. per '000 population) (trend)</b>									
June 2008 (M)	3.828	4.531	4.443	3.462	4.707	3.282	4.141	3.867	<b>4.176</b>
<b>Res. building approvals (no. per '000 population) (trend)</b>									
May 2008 (M)	0.358	0.631	0.808	0.713	0.852	0.539	0.336	0.405	<b>0.597</b>
<b>Res. building approvals (\$) (original)</b>									
May 2008 (M)	103	160	200	142	241	119	61	75	<b>153</b>
<b>Housing finance commitments (\$) (original)</b>									
May 2008 (M)	659	625	652	576	770	383	425	539	<b>643</b>

(a) The latest quarterly estimate of Australian resident population is shown in Table 9.2. This estimation has been used to calculate ratios for subsequent periods.

(b) Extreme care should be exercised in using the seasonally adjusted series for Private new capital expenditure for Northern Territory and the Australian Capital Territory. The highly erratic nature of this data makes reliable estimation of the seasonal pattern very difficult.

## 9.1 STATE SUMMARY *continued*

<i>Period</i>	<i>New South Wales</i>	<i>Victoria</i>	<i>Queensland</i>	<i>South Australia</i>	<i>Western Australia</i>	<i>Tasmania</i>	<i>Northern Territory</i>	<i>Australian Capital Territory</i>	<b>Australia</b>

(a) Original sales data are provided by the Federal Chamber of Automotive Industries and sourced from VFACTS.

(b) Extreme care should be exercised in using the seasonally adjusted series for the number of new motor vehicles sales in Tasmania, the Northern Territory and the Australian Capital Territory. The highly erratic nature of this data makes reliable estimation of the seasonal pattern very difficult.

## NOTES

## CONSUMER PRICE INDEX (CPI).

*Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to “provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index.” Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series “All groups excluding housing and financial and insurance services.” The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. 1989–90 = 100.0) and as such are not directly comparable with those for All items published in table 10.7 (presented on a reference base of 2000 = 100.0).*

## EXPLANATORY NOTES .....

### INTRODUCTION

**1** Explanatory Notes in the form found in other ABS publications are not included in *Australian Economic Indicators*. Readers are directed to the Explanatory Notes contained in related ABS publications.

**2** *Australian Economic Indicators* presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. It also includes commentaries, articles and technical notes. *Australian Economic Indicators* has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

**3** The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

### MOST RECENT DATA

**4** The statistics shown are the latest available as at 29 July 2008.

### RELATED PUBLICATIONS

**5** A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

**6** Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to *Australian Economic Indicators* include:

- *Australian and New Zealand Standard Industrial Classification (ANZSIC)*, cat. no. 1292.0
- *Australian System of Government Finance Statistics: Concepts, Sources and Methods 2005*, cat. no. 5514.0
- *Australian National Accounts: Concepts, Sources and Methods*, cat. no. 5216.0
- *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods*, cat. no. 5331.0
- *Labour Statistics: Concepts, Sources and Methods*, cat. no. 6102.0.55.001
- *Labour Price Index: Concepts, Sources and Methods*, cat. no. 6351.0.55.001
- *Australian Consumer Price Index: Concepts, Sources and Methods*, cat. no. 6461.0.

### SEASONALLY ADJUSTED AND TREND ESTIMATES

**7** Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

**8** It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements)
- short-term irregular changes
- regular seasonal influences
- normal 'trading', 'working' or 'pay' day patterns
- systematic holiday effects.

SEASONALLY ADJUSTED AND  
TREND ESTIMATES *continued*

**9** Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

**10** Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

**11** The general methods used in the ABS for making seasonal adjustments are described in Information paper: *An Introductory Course on Time Series Analysis - Electronic Delivery* (cat. no. 1346.0.55.001). The method used to estimate trends is described in Information Paper: *A Guide to Interpreting Time Series - Monitoring Trends* (cat. no. 1349.0).

**12** The ABS uses concurrent seasonal adjustment to derive the combined adjustment factors. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated. Further information on concurrent seasonal adjustment can be found in Information Paper: *Introduction of Concurrent Seasonal Adjustment into the Retail Trade Series, 1999* (cat. no. 8514.0).

## CHAIN VOLUME MEASURES

**13** The chain volume measures appearing in this publication are annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.

**14** Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 2005-06) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. A new base year and the reference year for volume measures was previously updated annually in the June quarter Australian National Accounts (*Australian Economic Indicators*, October issue). From 2007 onwards the reference year updates in the September quarter Australian National Accounts (*Australian Economic Indicators*, January issue) each year. In the September quarter 2007 Australian National Accounts issue, the new reference year became 2005-06 for volume estimates. This had two effects, first, a new base year, 2005-06, was introduced which has resulted in revisions to growth rates in subsequent periods. Second, the volume estimates have been re-referenced to 2005-06 thus preserving additivity in the quarters after the reference year. Re-referencing changes levels but not growth rates, although some revision to recent growth rates can be expected because of

## CHAIN VOLUME MEASURES

*continued*

the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

## OTHER USAGES

**15** Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left – in keeping with the international standard for these statistics. Some tables include subtotal columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

**16** Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

**17** Yearly periods shown as, e.g. 2005–06, refer to the fiscal year ended 30 June 2006.

**18** Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

## METRIC PREFIXES

**19** Deca (da) = ten

Hecto (h) = hundred

Kilo (k) = thousand

Mega (M) = million

Giga (G) = thousand million

Tera (T) = million million
