KEY POINTS

- Between July 1999 and May 2000 there were 4.3 million short-term visitor arrivals to Australia, 8% more than for the equivalent period ending May 1999.
- The trend estimate increased for the fifth consecutive month in May 2000.
- During the ten months to April 2000 the net gain of permanent and long-term arrivals over permanent and long-term departures was 96,800, 11% higher than for the ten months to April 1999 (86,900).
- Taiwan was the sixth largest source country of short-term visitor arrivals to Australia in 1999, with 3% of all arrivals. (For more information see special article on page 4).

- For further information about these and related statistics, contact the National Information Service on 1300 135 070, or Amanda Dobson on Canberra 02 6252 5640.

DATA NOTES

For data quality issues see Appendix 2 on page 21.

CHANGES IN THIS ISSUE

There are no changes in this issue.

TREND REVISIONS

Each time new seasonally adjusted estimates become available, trend estimates of short-term arrivals and departures are revised (see paragraph 19 of the Explanatory Notes).

The examples in the graphs below show two illustrative scenarios and the consequent revisions to previous trend estimates of visitor arrivals and resident departures.

1 The seasonally adjusted estimate for:

- June visitor arrivals is 3.02% higher than May
- May resident departures is 3.59% higher than April

2 The seasonally adjusted estimate for:

- June visitor arrivals is 3.02% lower than May
- May resident departures is 3.59% lower than April

VISITOR ARRIVALS

RESIDENT DEPARTURES

The percentage changes of 3.02% and 3.59% were chosen because they represent the average absolute monthly percentage changes between months for visitor arrivals and resident departures respectively over the last four years.

Dennis Trewin
Australian Statistician

MAIN FEATURES

SHORT-TERM MOVEMENTS

VISITOR ARRIVALS

There were an estimated 321,500 short-term visitor arrivals to Australia during May 2000 bringing the total number of visitor arrivals for the eleven months July 1999 to May 2000 to 4,305,900, 8% higher than the number of overseas visitors arriving in the equivalent period to May 1999 (3,971,000).

The major source countries of short-term visitor arrivals to Australia in the eleven months to May 2000 were New Zealand (16%), Japan (15%), the United Kingdom (12%), the United States of America (9%) and Singapore (6%). Compared to the eleven months to May 1999, there were increases in the number of visitor arrivals from New Zealand (up by 8%), the United Kingdom (up by 15%), and Korea (up by 59%). Japan and Taiwan were the only source countries in the top ten to record a decline in visitor arrivals, falling by 3% and 5% respectively. All other Asian countries in the top ten source countries recorded an increase in arrivals.

RESIDENT DEPARTURES

There were 307,700 short-term departures of Australian residents in April 2000, bringing the total for the 10 months to April 2000 to 2,743,600, an increase of 4% on the ten months to April 1999 (2,637,100). The main destinations of Australian residents departing short-term during April 2000 were New Zealand (16%), the United States of America (11%), the United Kingdom (10%) and Indonesia (9%).

During the 10 months to April 2000;

445,900 Australian residents mainly visited New Zealand, an increase of 7%;

300,300 residents mainly visited the United States of America, an increase of 14%;

254,100 residents mainly visited the United Kingdom, an increase of 8%;

217,800 residents mainly visited Indonesia, a decrease of 28%;

128,300 residents mainly visited Hong Kong, an increase of 6%;

124,400 residents mainly visited Thailand, an increase of 6%; and

121,000 residents mainly visited Singapore, an increase of 9%.

MAIN REASON FOR JOURNEY

Over half of all short-term visitors to Australia during the ten months to April 2000 stated on arrival that they had come here mainly for a holiday (56% or 2,240,200). A further 20% (777,100) stated that they were visiting friends and relatives, 9% (374,400) were on business trips, while 4% (142,500) came for educational purposes and 2% (94,900) came for a convention or conference.

MAIN STATE OF STAY

Forty three percent of overseas visitors departing Australia during the ten months to April 2000 stated that they had spent most of their time in New South Wales. A further 28% had spent most time in Queensland, 15% in Victoria and 10% in Western Australia. Compared to the ten months to April 1999, all of these States recorded higher visitor numbers, although the proportional distribution of visitors departing from the States remained unchanged. (See Appendix 2 for Northern Territory data quality issues).

SPECIAL ARTICLE

TAIWAN: SHORT-TERM VISITOR ARRIVALS

SHORT-TERM ARRIVALS

Taiwan was the sixth largest source country of short-term visitor arrivals to Australia in 1999 with 3% of all arrivals. There were 147,500 short-term visitor arrivals from Taiwan in this year, a sevenfold increase from 1989 (21,500). The average annual increase in short-term visitor arrivals from Taiwan in the 10 years to 1999 was 21%, compared with an 8% average annual growth rate for all short-term visitor arrivals. Most of the increase occurred between 1989 and 1994, when arrivals increased sevenfold, with a 46% average annual growth rate. Since 1995 there has been a slight decline (-0.8% average annual growth rate).

SHORT-TERM VISITOR ARRIVALS FROM TAIWAN

MAIN REASON FOR JOURNEY

Compared with all short-term visitor arrivals in 1999, a higher proportion of Taiwanese short-term visitor arrivals gave holiday as their main reason for journey (74% compared with 56%). There was a smaller proportion of Taiwanese short-term visitor arrivals visiting friends and relatives (5% compared with 19%), and a higher proportion travelling for education (5% compared with 3%). This distribution is similar to that during 1989, except for those travelling for business, where the proportion decreased from 9% in 1989 to 4% in 1999.

SEX

In 1999, Taiwan had the highest proportion of female short-term visitor arrivals to Australia (57%) compared with the other main source countries, like Japan (54%), New Zealand (49%), Singapore (49%), Hong Kong (48%), the United Kingdom (48%), and the United States (45%). Taiwanese female short-term visitors were more likely than male Taiwanese visitors to travel to Australia mainly for a holiday (76% compared with 71%), while males were more likely than females to travel mainly for business purposes (6% compared with 2%).

TAIWAN: SHORT-TERM VISITOR ARRIVALS

AGE

Taiwanese short-term visitor arrivals to Australia tended to be younger than all short-term visitor arrivals in 1999. The median age, which represents the age at which half of the arrivals are younger and half are older, was 34 years for Taiwanese arrivals compared with 38 years for all arrivals. The median age varied considerably depending on the main reason for journey, varying from 21 years for those who travelled mainly for education, 34 years for those who travelled mainly for a holiday, and 42 years for those who mainly visited friends and relatives. Female Taiwanese short-term visitor arrivals tended to be younger than male Taiwanese short-term visitor arrivals with a median age of 32 years compared with 36 years.

REASON FOR JOURNEY AND AGE, TAIWANESE VISITOR ARRIVALS 1999

STATE OF INTENDED ADDRESS

During 1999, the most popular main destinations for Taiwanese short-term visitor arrivals to Australia were New South Wales (43%) and Queensland (43%). Holiday was the main reason for visiting each State except South Australia, where the main reason for travel was education (34%). Those going to South Australia tended to be young, with 34% aged 15-24 years. The Northern Territory was more popular with those aged 35-44 years (49%) and the Australian Capital Territory with those aged 55-64 years (29%). Queensland, New South Wales and Victoria were more popular with those aged 25-34 years (29%, 28% and 23% respectively).

INTENDED DURATION OF STAY

During 1999, the majority (86%) of short-term visitor arrivals from Taiwan intended to stay for a duration of two weeks or less (with a median duration of stay of 8 days) compared with a two week duration of stay by 64% of all short-term visitor arrivals. Of the Taiwanese who came intending to stay for one month or less, 79% came for a holiday with a median duration of stay of 8 days. For the same period, this was shorter than for those who came for business (9 days), employment (9 days) and visiting friends or relatives (15 days). Among those who travelled for education, the median duration of stay was 5 months (153 days).

(a) Figures for short-term movement are based on a sample and are subject to sampling error. See paragraphs 9 and 10 of the Explanatory Notes for more detail. (b) See paragraphs 6 and 7 of the Explanatory Notes for more detail. (c) Includes not stated. (d) Data for September quarter 1998 has been revised. See Appendix 2 for more detail. (e) Includes 'Exhibition' from July 1998.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 21).

SOURCE OF THE STATISTICS

2 Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards (see Appendix 1). Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural Affairs (DIMA) serve as a source for statistics of overseas arrivals and departures.

3 In July 1998, DIMA revised the incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards were not compulsory and answers to these questions were not checked by Customs officers. The question on marital status was deleted. Data on marital status is now derived from visa applications (only for certain visa classes) and is therefore not available for Australian or New Zealand citizens. The changes also affect the data for 'Previous country of residence' which is imputed for Australian and New Zealand citizens. For more information see the May 1998 issue of this publication. Since July 1998, there have been additional minor changes to both passenger cards.

4 The preliminary estimates of visitor arrivals by country of residence (see Table 6, page 9) are based on data from DIMA's Travel and Immigration Processing System (TRIPS). The TRIPS system produces a limited range of data, including country of citizenship, which is used by ABS to produce preliminary estimates by country of usual residence. These preliminary estimates will be revised in the next issue of this publication, when final data is available. For more information see pages 3 and 4 of the June 1997 and the September 1998 issues of this publication.

SCOPE

5 The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages. Similarly, these statistics exclude those persons not travelling under standard visa conditions, such as 'boat people' and the 1999 intake of Kosovo refugees.

COUNTRY CLASSIFICATION

6 The classification of countries in this publication is the *Australian Standard Classification of Countries for Social Statistics* (ASCCSS). For more detailed information refer to the ABS publication *Australian Standard Classification of Countries for Social Statistics* (Cat. no. 1269.0).

7 The statistics on country of birth, citizenship, residence or main destination have certain limitations because of reporting on passenger cards. For instance, United Kingdom includes England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.

EXPLANATORY NOTES

STATE AND TERRITORY CLASSIFICATION

8 Following the 1992 amendment to the *Acts Interpretation Act* to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands.

ESTIMATION METHOD

9 Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.

10 Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short term movements are selected for sampling.

11 The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.

CORRECTIONS AND IMPUTATIONS

12 The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items. Information on non-sampling errors appears in Appendix 2.

13 Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and main reason for journey.

EXPLANATORY NOTES

SEASONAL ADJUSTMENT AND TREND ESTIMATES

14 Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.

15 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

16 The trend estimates for short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. These trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.

17 While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring Trends, an Overview* (Cat. no. 1348.0).

RELATED PUBLICATIONS

18 Users of these statistics may also wish to refer to the following ABS publications:

- *Australian Demographic Statistics* (Cat. no. 3101.0)—issued quarterly
- *Migration, Australia* (Cat. no. 3412.0)—issued annually
- *Tourism Indicators, Australia* (Cat. no. 8634.0)—issued quarterly.

19 Related statistics are also published by the Department of Immigration and Multicultural Affairs, the Department of Transport and Regional Services and the Bureau of Tourism Research.

20 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. Both are available from any ABS office or the ABS website.

EXPLANATORY NOTES

ADDITIONAL STATISTICS AVAILABLE **21** As well as the statistics included in this and related publications, other relevant unpublished data are available for the following variables:

Citizenship (Nationality)
 Country of birth
 Age (Date of birth)
 Sex
 Marital status (not available for Australia or New Zealand citizens)
 Category of travel
 Permanent migrant
 Previous/future country of residence
 State of intended address/lived
 Overseas visitor
 Intended/actual length of stay
 Main reason for journey
 Country of residence
 State of intended address/in which most time spent
 Australian residents
 Intended/actual time away from Australia
 Country spent/intend to spend most time in
 State of intended address/lived
 Occupation (not available for short-term movements)
 State of intended/actual address
 Country of embarkation/disembarkation
 Airport/Port of arrival/departure
 Arrival/departure date
 Intention to live in Australia for next 12 months (not available for short-term movements)

22 This publication draws extensively on information provided by the Department of Immigration and Multicultural Affairs. This continued cooperation is very much appreciated: without it, the statistics published would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.

G L O S S A R Y

Australian resident	Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.
Category of movement	<p>Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main <i>categories of movement</i>:</p> <ul style="list-style-type: none"> ▪ permanent movements ▪ long-term movements ▪ short-term movements. <p>A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.</p>
Country of residence	Country of residence refers to the country in which travellers regard themselves as living or as last having lived.
Intended length of stay	On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.
Long-term arrivals	<p>Long-term arrivals comprise:</p> <ul style="list-style-type: none"> ▪ overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and ▪ Australian residents returning after an absence of 12 months or more overseas.
Long-term departures	<p>Long-term departures comprise:</p> <ul style="list-style-type: none"> ▪ Australian residents who intend to stay abroad for 12 months or more (but not permanently); and ▪ overseas visitors departing who stayed 12 months or more in Australia.
Main destination	Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.

G L O S S A R Y

Main reason for journey	<p>On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to <i>main reason for journey</i> have been published using the following categories:</p> <ul style="list-style-type: none"> ▪ convention/conference ▪ business ▪ visiting friends/relatives ▪ holiday ▪ employment ▪ education ▪ other <p>In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.</p>
Main State/Territory of stay	Overseas visitors are asked on departure for the name of the State or Territory in which they spent the most time.
Overseas Arrivals and Departures (OAD)	Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).
Permanent arrivals	<p>Permanent arrivals (settlers) comprise:</p> <ul style="list-style-type: none"> ▪ travellers who hold migrant visas (regardless of stated intended period of stay); ▪ New Zealand citizens who indicate an intention to settle; and ▪ those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens). <p>This definition of settlers is used by the Department of Immigration and Multicultural Affairs. Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the Department of Immigration and Multicultural Affairs.</p>
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.
Short-term arrivals	<p>Short-term arrivals comprise:</p> <ul style="list-style-type: none"> ▪ overseas visitors whose intended stay in Australia is less than 12 months; and ▪ Australian residents returning after an absence of less than 12 months overseas.
Short-term departures	<p>Short-term departures comprise:</p> <ul style="list-style-type: none"> ▪ Australian residents who intend to stay abroad for less than 12 months; and ▪ overseas visitors departing who stayed less than 12 months in Australia.

STANDARD ERRORS

RELIABILITY OF ESTIMATES

- 1 Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.
- 2 The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.
- 3 It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following tables of standard errors and relative standard errors give an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

<i>Estimated number of persons</i>	SHORT-TERM DEPARTURE OR ARRIVAL OF AUSTRALIAN RESIDENTS		SHORT-TERM ARRIVAL OR DEPARTURE OF OVERSEAS VISITORS		TOTAL ARRIVALS OR DEPARTURES	
	<i>Standard error</i>	<i>Relative standard error</i>	<i>Standard error</i>	<i>Relative standard error</i>	<i>Standard error</i>	<i>Relative standard error</i>
	no.	%	no.	%	no.	%
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

- 4 An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.
- 5 The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

STANDARD ERRORS

RELIABILITY OF ESTIMATES

continued

6 The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.

7 An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 (1.4×190), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.

APPENDIX 1—PASSENGER CARDS (a)

INCOMING CARD – FRONT

Incoming passenger card • Australia PLEASE COMPLETE IN ENGLISH ▶ Family/surname <input type="text"/> ▶ Given names <input type="text"/> ▶ Passport number <input type="text"/> ◆ Flight number or name of ship <input type="text"/> ▶ Intended address in Australia <input type="text"/> State <input type="text"/> ▶ Do you intend to live in Australia for the next 12 months? DECLARATION The information I have given is true, correct and complete.		PRESENT THIS CARD ON DEPARTURE WITH YOUR BOARDING PASS AND PASSPORT.	
YOUR SIGNATURE <input type="text"/> DAY <input type="text"/> MONTH <input type="text"/> YEAR <input type="text"/>			

(a) Revised card used from November 1999, see paragraphs 3 and 4 of the Explanatory Notes for information on passenger card changes.

APPENDIX 2 — DATA QUALITY ISSUES

NON-RESPONSE RATES PRIOR TO IMPUTATION XXXXX 1999(a)

OAD variables	Incoming Variables	Outgoing Variables
	%	%
Citizenship (Nationality)	0.20	0.26
Country of birth	0.05	0.01
Age (Date of birth)	0.00	0.00
Sex	0.01	0.00
Marital Status(b)	40.71	50.87
Category of Travel	1.28	0.58
Permanent migrant		
Previous/future country of residence	0.10	0.00
State of intended address/lived	n.a.	n.a.
Overseas visitor		
Intended/actual length of stay	1.31	0.04
Main reason for journey	3.18	..
Country of residence	n.a.	..
State of intended address/in which most time was spent	n.a.	n.a.
Australian residents		
Actual/Intended time away from Australia	0.05	1.15
Main reason for journey	..	2.21
Country spent/intend to spend most time in	n.a.	n.a.
State of intended address/lived	n.a.	n.a.
Occupation(c)	0.03	0.00
Country of embarkation/disembarkation	0.06	0.01
Airport/Port of arrival/departure	0.00	0.00
Arrival/departure date	0.00	0.00
Whether intend to live in Australia for next 12 months	1.10	..

(a) Non-response rates are unweighted.

(b) Not available for Australia or New Zealand.

(c) Not available for short-term movements.

DURATION OF STAY

From July 1998 the Department of Immigration and Multicultural Affairs (DIMA) are able to determine the actual length of stay for departing overseas visitors and arriving Australian residents which was previously collected from information on intended length of stay supplied on the arrival or departure card by the passenger. This new method has resulted in a change in data distribution with the number of passengers staying for one year exactly declining significantly.

INTENDED LENGTH OF STAY / TIME AWAY FROM AUSTRALIA

Non-response rates are available for these data items from November 1998. For data prior to November 1998, imputation carried out as part of processing by the Department of Immigration and Multicultural Affairs (DIMA) has prevented reliable estimation of non-response rates for these two data items.

MAIN REASON FOR JOURNEY

Before the introduction of the redesigned passenger card in July 1998, 5% of short-term visitor arrivals, on average, were recorded as having a reason for journey of 'Other' or 'Not Stated'. This percentage rose to 14% for July, 16% in August and 29% in September 1998 as a result of processing problems. These problems have now been addressed by DIMA, with the percentage of 'Other' and 'Not Stated' dropping in October 1998 to 8% and 7% in November 1998.

From the January 1999 issue of this publication, published figures (Table 3 and Table 9 in this publication) referencing these three months have been revised. The revised data were calculated by estimating the number of persons responding 'Other / Not Stated' using past trends for each country of citizenship and proportionally allocating any persons in excess of the estimated 'Other / Not Stated' total amongst the remaining categories. 'Not Stated' rates are now separately available from February 1999 onwards.

APPENDIX 2 — DATA QUALITY ISSUES

STATE IN WHICH MOST TIME WAS SPENT

For the months of August 1998, September 1998 and October 1998, data entry problems experienced by DIMA caused an overstatement of the Northern Territory as the main State of stay with a corresponding understatement for the remaining States and Territories. These numbers have returned in November 1998 to levels more comparable with previous years, with DIMA indicating that they have instigated data quality procedures to address this issue.

From the January 1999 issue of this publication, published figures (Table 8 in this publication) referencing these months have been revised. The revised data were calculated by estimating the number of persons indicating the Northern Territory as their main State of stay using past trends and proportionally allocating any persons in excess of these estimates amongst the remaining States and Territories.

The significant increase in visitor arrivals and departures for the Northern Territory in April 2000 was mainly due to a large increase in the number of "in transit" type visitors i.e. visitors staying in the Northern Territory for between 1 and 3 days. Of the 6,400 visitors departing the Northern Territory in April 2000, 2,200 had a duration of stay of between 1 and 3 days.

SEPTEMBER 1998 PROCESSING

A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth.

DATA IMPUTATIONS

Data are imputed for certain variables when no responses are recorded on the respective passenger cards. These variables and the information used to impute for them are listed in the table below.

DATA ITEM	IMPUTATION
Category of travel	Includes references to citizenship (Australia, New Zealand, Other), corresponding migration visa, intended length of stay and whether intend to live in Australia for next 12 months
Intended length of stay	10 days
Country of residence	Country of departure, if it also matches country of citizenship
State lived / in which most time was spent	State of clearance

SEPTEMBER 1999 PROCESSING

September 1999 overseas arrivals and departures data are revised for migrants from China (excl SARs and Taiwan Province) and Hong Kong (SAR of China) in respect of three variables: country of birth, country of citizenship and country of residence/stay. Changes to 'country of birth' and 'country of citizenship' have been made from data supplied by DIMA. Changes to 'country of residence/stay' have been made by assuming the average proportion of country of birth to country of residence/stay for migrants from China (excl SARs and Taiwan Province) and Hong Kong (SAR of China) in September over the last 4 years (1995 to 1998).
