Ancestry is coded using the [Australian Standard Classification of Cultural and Ethnic Groups \(ASCCEG\), 2016](#) (cat. no. 1249.0).

To analyse ancestry, both ancestry variables (ANC1P and ANC2P) must be used. There are two ancestry variables because respondents to ancestries in their response to the Census question on ancestry. Respondents do not have the option of ranking their answers to the ancestries, those two ancestries have equal standing. The basis for allocating ancestries to the variables ANC1P and ANC2P is based on the ancestry variables (ANC1P and ANC2P) are combined into one variable Ancestry Multi Response (ANCP).
