AUSTRALIAN DEMOGRAPHY.

PREFACE.

The present issue of the Demography Bulletin, which is the fifty-sixth of the series, furnishes particulars for 1938 and previous years. The statistical summary has been considerably enlarged and much of the data taken back to the year 1860.

An additional Section has been added to include some of the leading particulars of the recently constructed Australian Life Tables, based on the census results of 1933, combined with the related deaths for the years 1932-34.

A table showing the estimated age distribution of the population has been included in Section I., Population (see p. 20).

In Sections III., Births, and IV., Deaths, the tabulations have been made according to the place of usual residence. The classification of occupations appearing in Sections III., IV. and V. follows the classification used in the Census of England and Wales, 1931, which was adapted to the requirements of the Australian Census of 1933. In Section IV., Deaths, the classification of causes of death is in accordance with the "International List of Causes 1929" (International Commission, Paris, 1929).

The tables have been re-numbered in the present issue of the Demography but follow the same form as in the previous year.

Population estimates and migration records have been adjusted on the basis of the results of the various censuses, including that of the 30th June, 1933, and all rates have been computed on the amended mean population figures so ascertained.

To facilitate reference to the matter contained in the various sections of the Demography, a detailed alphabetical Index will be found at the end of the volume.

I take this opportunity of expressing my thanks to the various State Departments responsible for the registration of births, deaths, and marriages for the valuable assistance rendered by them in supplying the data for the compilation of the Vital Statistics, and to the Government Statistician, Sydney, for kindly furnishing data for the State of New South Wales. Special thanks are due to Mr. E. H. Harry, B.A., B.Com., the officer in charge of the compilation of the Vital Statistics in this Bureau, for the care and attention which he has devoted to the work involved.

ROLAND WILSON,
Commonwealth Statistician.

NOTE.—The reference to the different States indicates the place where immigrants left the oversea ship and where emigrants embarked upon the oversea ship. The figures do not indicate the effect of migration on the populations of the several States; for that purpose it is necessary to take into account the interstate migration.

(a) Per 1,000 of mean population.

NOTE.—The mean populations shown above for divisions in 1937 are the respective State Statisticians' estimates and are based on data obtained from various local sources. The results differ from those published prior to 1935 as in earlier years the estimates of population used in the table above were calculated for each division according to the proportions ascertained at the previous Census. Owing to the varying methods adopted in the States, it has not been possible to give separate estimates of the migratory population for 1938 in all cases. In Queensland, Western Australia and Tasmania the proportion representing migratory population is absorbed automatically in the divisional totals in the process of computation of the mean population.

(a) Number of births per 1,000 of mean population. (b) The birth rates for the Australian Capital Territory in the table above are based on births which actually occurred in the Australian Capital Territory. Until recently, a large proportion of births, normally applicable to the Territory as the mother's usual place of residence, took place in Queanbeyan, just over the New South Wales border, but with improved hospital facilities in the Territory the movement to outside hospitals is rapidly diminishing. The birth rates for all births applicable to the Territory are as follows:—1924, 17.26; 1925, 20.87; 1926, 22.41; 1927, 21.10; 1928, 23.38; 1929, 23.28; 1930, 22.07; 1931, 21.40; 1932, 20.00; 1933, 19.06; 1934, 17.50; 1935, 19.52; 1936, 17.97; 1937, 21.28; 1938, 18.88. (c) Revised rates based on mean populations adjusted in accordance with the results of Census of 30th June, 1938.

(a) Number of deaths per 1,000 of Mean Population.

NOTE.—The mean populations shown above for divisions in 1938 are the respective State Statisticians' estimates and are based on data obtained from various local sources. The results differ from those published prior to 1935 as in earlier years the estimates of population used in the table above were calculated for each division according to the proportions ascertained at the previous Census. Owing to the varying methods adopted in the States, it has not been possible to give separate estimates of the migratory population for 1938 in all cases. In Queensland, Western Australia and Tasmania the proportion representing migratory population is absorbed automatically in the divisional totals in the process of computation of the mean population.

(a) Number of deaths per annum per 1,000 of mean population. (b) Computed by the application to a population of standard age and sex distribution, of the death rates for age groups according to sexes. (For standard population adopted, see *Official Year Book No. 22*, page 962.) The death rates for each State and Territory and for the Commonwealth in 1938 are based on the proportion of population in each age group revealed at the Census of the 30th June, 1933, and the results are, therefore, liable to error on account of the changed age constitution of the population since that date. It has been possible to obtain, from records of migration and of births and deaths in successive years since the Census, a more accurate estimate of the age distribution for the Commonwealth as a whole and the recalculated indexes of mortality for the Commonwealth for 1938 on this basis are as follows:—Males, 9.38; females, 7.83; persons, 8.59.

NOTE.—Comparison of causes of death in the table above with years prior to 1931 should be made with caution owing to changes in classification which occurred in 1931 when the 1929 revision of the International Nomenclature of Causes of Death was adopted in Australia. The connexion between the former classification title numbers and present ones is set out in detail in a footnote to this table in No. 53 and previous issues of the Demography.

NOTE.—Rate represents excess of arrivals over departures per cent. of mean population: Minus sign (-) denotes excess of departures over arrivals or rate of decrease.

(a) Part of New South Wales prior to 1911.

(b) Increase due principally to inclusion of Jervis Bay in Australian Capital Territory.

(c) Revised rates based on figures adjusted in accordance with the results of Census of 30th June, 1938.
